## C-Sections Among Nulliparous Term Singleton Vertex (NTSV) Deliveries 1997-2014

Hospital Rate with 95% Confidence Limits

## Primary C-Sections Among Term Singleton Vertex (TSV) Deliveries 1997-2014

Hospital Rate with 95% Confidence Limits

## Vaginal Birth After Cesarean Among Term Singleton Vertex (TSV) Deliveries 2003-2014

Hospital Rate with 95% Confidence Limits

95% Confidence Limits show the range within which a data point could reasonably be the result of random variation. Points outside of this range are considered to differ significantly from the point for which the confidence limit is calculated, since there is only a 5% chance that the difference is due to random variability.

### C-Sections Among Nulliparous Term Singleton Vertex (NTSV) Deliveries 1997-2014 (Six-Month Intervals)

Actual Hospital Rate Compared to Hospital Average Across Time

### Primary C-Sections Among Term Singleton Vertex (TSV) Deliveries 1997-2014 (Six-Month Intervals)

Actual Hospital Rate Compared to Hospital Average Across Time

Charts based on the Hospital average over time are not presented where the Hospital number of deliveries for any six-month period did not meet the standard recommended size for upper (UCL) and lower (LCL) control lines based on 3 standard deviations. Rates above or below the red lines show a greater difference from the average than do those between the red lines.

**DATA SOURCES AND DEFINITIONS:** Certificates for live births and fetal deaths were provided by the DOH Center for Health Statistics and included in the First Steps Database. Medicaid status was determined by individual-level linkage to Medicaid claims and eligibility performed by the First Steps Database. **2014 birth data are preliminary.** Years refer to calendar years.

**Excludes** births in military facilities or facilities that do not typically perform deliveries. C-Section measures exclude cases where mother was transferred to higher level care for maternal medical or fetal indicators for delivery, or hospital births where intended place of birth was other than hospital.

**Perinatal Level of Care designation** is as of 2014 for all years shown. **Total Deliveries** includes live births and fetal deaths after 20 weeks' gestation. **Medicaid** refers to births to women who received Medicaid-paid maternity care. **C-Sections (NTSV)** is the percent of Cesarean sections among nulliparous, term, singleton, liveborn, vertex deliveries. **Term** is defined as gestational age of at least 37 completed weeks. **Vaginal Births After Cesarean (VBAC)** is the percent of vaginal births among live births to appropriate candidates. Women whose pregnancies were at term, had a single fetus with vertex presentation, and who had one prior C-section were considered **appropriate candidates for VBAC.** Number of prior C-sections is determined by Birth Certificate number reported and by longitudinal linkage. **Chart comparison VBAC Rates** are limited to hospitals that offer planned vaginal birth delivery after a prior Cesarean section (VBAC). **Primary C-Sections** is the percent of Cesarean sections among term, singleton, liveborn, vertex deliveries to women with no prior C-sections. The **Primary TSV C-Section Target** for Washington State is based on Results Washington (see [www.results.wa.gov](http://www.results.wa.gov)).
